BDCW - ULTIMATE Skid Plate (BMW F850GSA/F850GS/F750GS 2019-2020)

*Once again **BMW** has developed a motorcycle with absolutely no convenient mounting locations for a durable skid plate. There is no cradle or framework to tie into for mounting a rugged skid plate—so we had to get creative.*

BDCW's continues its innovative approach by creating a **one-piece underlying mounting bracket** that ties into the **center stand's framework**. Our design effectively prevents the skid plate from shifting backwards and potentially damaging your bike. This design, combined with a rubber *Shok-Blok* installed between the front of the skid plate mount and the engine case, ensures our skid plate and mounting system will take a beating long after others have failed.

Ease of installation was another critical design element, as was removal of the skid plate for maintenance. The initial installation of your skid plate should take less than 10 minutes. And with only four bolts to remove for maintenance duties, the skid plate comes off in less than 60 seconds.

Made from 3/16-inch (4.76mm) 5052 aluminum, the **BDCW ULTIMATE Skid Plate** provides maximum protection of the engine components and header while providing a smooth glide surface to clear obstacles with no exposed bolts or plastic sliders to get in the way. Our design is also useful when performing maintenance on the bike as it provides a flat level surface to lift your bike.

Skid Plant mounting bracket.

- **BMW F850GS (2019-2020)**
- **BMW F750GS (2019-2020)**
- **F850GSA (2019-2020)**

- ***If you have a LOW model - please contact us for details.***
- ***DOES NOT FIT THE 2021 MODELS - we are working on a new fitment for those models***

Installation instructions were very clear and it took me about 45 minutes to remove the old OEM plate and install the BDCW skid plate and center stand plate.
